

Manage iTunes Music, Video with Keyspan TuneView Remote Control

Keyspan ships TuneView, a Wireless Color LCD Remote Control for iTunes that offers complete control of music, MP3 files, podcasts, and video from up to 150 ft away.

Richmond, CA, USA, 2007-07-24 17:46:31 (IndiaPRwire.com)

Keyspan announced TuneView, a wireless remote control that manages iTunes® on a PC or Apple® Macintosh® in an entirely new way. TuneView features a color LCD screen and familiar iPod-like menus that help users easily browse and control iTunes music, videos, radio, and podcasts from up to 150 ft. away.

TuneView works with Apple's AirPort Express, Xitel's Hi-Fi Link and other products that connect audio output from a PC-based music server to the audio inputs on an AV receiver or multi-room audio system.

"TuneView provides the missing piece to the PC music server puzzle," explained Mike Ridenhour, president at Keyspan. "There have been many ways to feed sound from iTunes to a stereo system, but there has never been an effective and affordable way to control iTunes from anywhere in your house."

TuneView features include:

- Remote features color LCD screen and intuitive 10-button keypad
- TuneView USB transceiver plugs into USB port on a PC or Mac
- 2.4 Ghz RF connectivity between remote and transceiver
- RF signal works through walls and furniture up to 150 ft range
- iTunes content presented on the remote in familiar iPod-like menu style
- Controls iTunes music, videos, radio and podcasts
- Supports English, French, German and Spanish

Now shipping, TuneView has an MSRP of \$149 and is available to consumers at Keyspan's Online Store, PC Connection, PC Mall, Amazon.com and other leading resellers. TuneView is available to resellers in the U.S. via Ingram Micro, D&H, and Wynit. Check the Keyspan website for international distributors.

- END -
