

## Hexolabs helps business grow through .mobi sites

*Hexolabs ventures into development of .mobi sites to help businesses grow both its size and performance.*

Kanpur, Uttarpradesh, IND, 2008-04-09 12:57:45 (IndiaPRwire.com)

We at Hexolabs always make use of the new technologies to help our clients grow their business. In this trend we now help businesses grow through the mobile interface through our latest development of customized, high effective and user friendly mobile websites.

In building .mobi sites it is important to make the most out of the small real estate (small screen size of the mobile interface) and give the customers and the client the best. We have highly skilled technologists who work with great zeal towards achieving the goals for our clients.

We follow the best practices for the development of the mobile sites. We are sure that our clients would largely benefit from it. There is no better media for a mass reach other than the mobile interfaces. A more personalized and simple approach helps create customer loyalty and satisfaction. Giving the customer what he really wants is an art and we strive to achieve that through our advanced research.

**- END -**

About us:

Hexolabs is a leading research based design company in India that helps organizations innovate through design research. Our design methodologies identify emerging market opportunities and translate these findings into innovative new product and service experiences. We drive our solutions from research to production, offering our clients a true end-to-end partnership.
