

F-Secure selected by Microsoft for content security on Windows Home Server

Windows Home Server is an upcoming Microsoft solution to help families easily centralize, share and protect their digital assets, such as photos, music and videos.

Mumbai, Maharashtra, May 17, 2007 /[India PRwire](#)/ -- F-Secure announces selection by Microsoft as the first data security vendor for Windows Home Server. On May 15 at the 2007 Windows Hardware Engineering Conference in Los Angeles Microsoft announced F-Secure software will interoperate with Windows Home Server to protect consumers against computer viruses and other threats from the Internet and mobile networks.

Windows Home Server is an upcoming Microsoft solution to help families easily centralize, share and protect their digital assets, such as photos, music and videos.

F-Secure provides protection for the precious and often irreplaceable content of the digital home on the Windows Home Server solution. F-Secure provides protection against virus and spyware attacks, guards against riskware and also includes scanning of hidden malicious software (rootkit protection). The F-Secure solution keeps itself automatically up-to-date with the latest protection against new threats and needs no user intervention. This ensures that home users can rely on Windows Home Server and can take full advantage of its data centralization and protection capabilities.

"F-Secure has a strong track record of providing easy-to-use security technology that reliably protects consumers against rapidly evolving threats. We are pleased to work with F-Secure to help customers secure their digital memories and experiences," says Steven VanRoekel, director of Windows Server Solutions at Microsoft.

"This collaboration fits well in our product portfolio and we are proud to work with Microsoft to offer customers a solution to support Windows Home Server. We look forward to a continued strong cooperation with Microsoft," said Kimmo Alkio, CEO at F-Secure Corporation.

Notes to Editor

About F-Secure Corporation

F-Secure Corporation protects consumers and businesses against computer viruses and other threats from the Internet and mobile networks. We want to be the most reliable provider of security services in the market. One way to demonstrate this is the speed of our response. According to independent studies in 2004, 2005 and 2006 our response time to new threats is significantly faster than our major competitors. Our award-winning solutions are available for workstations, gateways, servers and mobile phones. They include antivirus and desktop firewall with intrusion prevention, antispam and antispyspware solutions. Founded in 1988, F-Secure has been listed on the Helsinki Exchanges since 1999, and has been consistently growing faster than all its publicly listed competitors. F-Secure headquarters are in Helsinki, Finland, and we have regional offices around the world. F-Secure protection is also available as a service through major ISPs, such as France Telecom, TeliaSonera, PCCW and Charter Communications. F-Secure is the global market leader in mobile phone protection provided through mobile operators, such as T-Mobile and Swisscom and mobile handset manufacturers such as Nokia. The latest real-time virus threat scenario news are available at the F-Secure Data Security Lab weblog at <http://www.f-secure.com/weblog/>
