Ahmedabad, Gujarat, November 20, 2009 /[India PRwire](http://www.indiaprwire.com)/ -- NTPL launches the Patient Management software used majorly in Hospital, Clinics, Medical centers, Medical Stores, Medical Colleges. This system makes the medical segments work easier and faster. It helps the management or the person in charge to work with ease. Neesa technologies improve the excellence and management of Patient management system in various areas. NTPL endeavors to minimize costs and enhance the accuracy and timeliness of patient care, accounting and administration, record keeping and management reporting.

Neesa technologies can significantly expand your competence via our fully integrated Patient Management System. Overall, NTPL Patient Management System forms a blend of Services, Technology and rich domain experience of Hospital industry. We serve the most vital functional areas of latest multi-specialty hospitals. The 'Patient Management System' or PMS, as we know it is the latest software application that enables a smooth method to preserve and update all the information about the Patient. This software comprise of Patient Registration, Electronic Medical Record and many more features.

At NTPL, we develop the most robust and scalable healthcare solutions from focusing at sanctioning healthcare providers and simplifying the activities concerned with patient management in hospitals. By utilizing this software the methods of collecting information becomes much easier, and eradicates the tedious tasks of maintaining paper files. Availability to and retrieval of patient data is made rapidly and more efficiently, thus facilitating doctors to reach decisions on diagnosis and course of treatment faster.

The software developed by NTPL would enhance the speed of scheduling appointments; assist deduction in user error, and allowing meaningful analysis of patient information on hundreds of thousands of archived records. This system also allows doctors to spare more time in corresponding with more patients and consuming less time in doing paper work. With the application of this patient management system, all information is recorded legibly and leaves no space or question for errors and information loss during communications between doctors and healthcare staff.
